The WBS above describes each general task that was done/led by the group member indicated on it, the first time shown is the time we planned for that task and the second time is the actual duration that it took.

Since our team chose waterfall methodology to be our SDLC, we always made decisions with the necessity of getting reviews from every member of the group before moving to the next phase. The most of the tasks were done on time except we had some technical issues such as setting up the compiler environment, or committing to the repository during the coding part etc. Overall, the team considers each individual tasks were done on time throughout whole project time frame.
